Formats for administration

Direct assessment

Administration

10 minutes

Scoring

Manual, Electronic

Psychometric Properties

Psychometric properties for the original version:

Reliability: 0.80 – 0.97 (α); test-retest 0.65 – 0.94.

Validity: with ADHD-IV-P 0.48 – 0.90; with the CBL-1½-5 0.12 – 0.67

Training

Test user accreditation; relevant qualifications/experience

Strengths and Weaknesses

Provides a link between executive function and social-emotional control.

The assessment of executive function in pre-school-aged children is often difficult because of the variable nature of behaviour in this age range; the limitations in motor and verbal proficiency at this age; and the many neuropsychological, psychological, developmental, and other medical conditions that begin to manifest during the preschool years. The BRIEF-P™ is designed to specifically measure the range of behavioural manifestations of executive function in children as young as 2 years of age, thus facilitating intervention at earlier stages of development.
